Summary

The name “Social.” is short, memorable, and aligned with the product category. However, it is highly generic, widely used in tech, and likely to create challenges in app store uniqueness, brand protection, domain acquisition, and SEO/ASO visibility. While it may be possible to publish an app with this name, it offers low distinctiveness and presents legal and branding risks.

Findings

1. App Store Availability

On the iOS App Store, there is already an app titled “.Social”, which makes the name non-unique and increases likelihood of confusion or rejection during review.

According to Apple’s App Review Guidelines, under section 2.3.7:

“Choose a unique app name, assign keywords that accurately describe your app, and don’t try to pack any of your metadata with trademarked terms, popular app names, pricing information, or other irrelevant phrases just to game the system. App names must be limited to 30 characters.”

On Google Play, app titles can repeat, but competition on a generic name is high and discoverability becomes difficult. Because the name is generic, ASO performance will be weak. Users searching “social” will see thousands of unrelated results.

2. Domain & Branding

Generic names are usually difficult and expensive to secure as domains (e.g., social.com.br, social.com, social.app).

Strong branding becomes challenging: users may not easily associate “Social” with a single product or company.

3. Trademark Risk

The term “Social” is generic and likely appears in multiple trademark classes.

Because it’s descriptive of social or communication services, obtaining exclusive trademark rights is unlikely, especially in the software/services category.

Rules

Character Length: Both Apple and Google limit app names/titles to 30 characters. “Social.” is well within that.

Distinctiveness & uniqueness: Both stores require names that stand out and are not easily confused with other apps or generic terms.

Generic names are risky: The more generic the name, like “Social.”, the higher the risk of rejection, confusion, or poor discoverability.

Trademarks/infringement: Both platforms implicitly require you to have rights to the name (or at least not infringe). If the name is already heavily used, trademarked, or too similar to others, you may face rejection or later legal risk.
